Arsenal Capital Partners' Refinancing of Pinnacle

It was the spring of 2021 as Terry Mullen (HBS '96), Managing Partner and Chief Investment Officer of Arsenal Capital Partners ("Arsenal"), and Investment Partner, Roy Seroussi, gathered to discuss the refinancing options for Pinnacle^a, a portfolio company in one of their funds.^b Pinnacle was formed by Arsenal in 2018 through a merger of two businesses, and soon became a leading producer of high performance and innovative adhesive technologies in the electronics, infrastructure, and industrial markets. Under Arsenal's direction, Pinnacle rapidly expanded through a series of key acquisitions achieving \$60 million in earnings before interest, taxes, depreciation, and amortization ("EBITDA") from \$13.5 million just two years earlier. With additional acquisitions in the pipeline, Arsenal had positioned Pinnacle as a key player in the highly fragmented, global adhesives sector.

Due to Pinnacle's significant growth during the first three years of ownership by Arsenal, in the summer of 2021, the firm had to decide how to recapitalize the company and position it for future growth. The company, which executed on an aggressive, inorganic strategy since 2018, had two acquisitions under letter of intent ("LOI") and a robust pipeline of acquisitions that were in advanced stages. Many of the acquisitions that Pinnacle were pursuing were sizeable relative to the historical acquisitions completed by the company and required significant capital.

To support Pinnacle's continued growth and its plan in the coming years, the Arsenal team needed to secure additional financing. Up until 2021, Arsenal had relied on the original debt financing of Pinnacle, which dated back to September 2018 and was provided by a consortium of two direct lenders. Mullen and Seroussi outlined four refinancing options: (i) expanding the facility while maintaining the current direct lending structure, (ii) refinancing debt with a combination of existing and new lenders, (iii) refinancing with a first-lien syndicated loan, or (iv) pursuing a dividend recapitalization, which would require a first-lien and second-lien syndicated loan structure.

During 2021, Arsenal and Pinnacle's management team noticed the global macroeconomic conditions were showing signs of challenges, with rising inflation and dampened confidence in the

^a "Pinnacle" is a disguised name of an actual portfolio company.

industrial sector. Moreover, the COVID-19 pandemic disrupted global supply chains, causing shortages of key raw materials used in adhesives.¹

Beyond the near-term financing considerations and against a challenging macroeconomic backdrop, Arsenal still received several inquiries from strategic and financial buyers to acquire Pinnacle, due to its differentiated growth profile. In response to the robust mergers and acquisitions (“M&A”) opportunity and buyer interest in the company, Mullen and Seroussi also had to assess the refinancing options for Pinnacle to best position the company for a future sale. Each alternative presented its own set of trade-offs, including cost implications, operational flexibility, and financial flexibility. Mullen and Seroussi had to determine which structure would be the best fit for the fund, Pinnacle’s continued growth, and its eventual exit prospects.

Arsenal Capital Partners

Arsenal Capital Partners was founded in 2000 as a middle market private equity firm focused on building market-leading companies in the healthcare and industrial verticals. With extensive prior experience in private equity at Thomas H. Lee Partners, Mullen established Arsenal as a platform to leverage deep sector expertise, operational insights, and a collaborative approach to drive transformative growth and deliver lasting value.

As of mid-2021, Arsenal has raised institutional equity investment funds totaling over \$5.3 billion, completed more than 200 platform and add-on acquisitions, and achieved more than 25 realizations. Unlike other private equity firms, Arsenal aimed to stand out by partnering closely with management teams to accelerate growth and establish industry dominant technology positions within specialized markets. Arsenal was drawn to the industrial and healthcare sectors primarily due to their strong long-term growth fundamentals, wealth of technology driven and innovative companies, and opportunities for meaningful value creation for Arsenal as an investor. Within the industrial sector, Arsenal had significant experience and expertise in specialty materials, particularly adhesives, sealants, coatings, and elastomers.

Prior to forming Pinnacle, Arsenal successfully exited a different adhesives and sealants company after selling the company to another major private equity firm. During that investment, EBITDA grew tenfold in five years. Through their track record of investing and transforming adhesives and sealants companies, Arsenal developed deep expertise in the sector and built a strong network that allowed them to capitalize on emerging market trends, making the firm well positioned to build a company like Pinnacle.

Pinnacle

Headquartered in Houston, Texas, Pinnacle was founded in 2018 by Arsenal through a combination of two leading manufacturers of high-performance specialty adhesives and a specialty manufacturer for infrastructure and electronics adhesives. The initial debt financing for Pinnacle was provided through a direct lender package funded by Kayne Anderson Capital Advisors (“Kayne Anderson”) and TPG Twin Brook Capital Partners (“Twin Brook”).

Kayne Anderson Capital Advisors, founded in 1984, was an alternative investment management firm with real estate, credit, infrastructure/energy, renewables, and growth equity strategies. Kayne Anderson’s private credit division focused on the middle-market space, targeting \$10 million to \$100 million investments.² Kayne Anderson’s deal transactions included buyouts, growth capital

investments, M&A, refinancing, and recapitalizations. Their product offerings included senior secured loans, equity co-invest, and unitranche facilities. As of the end of 2020, Kayne Anderson's credit platform managed more than \$13 billion across various credit strategies (including middle market lending, opportunistic credit, liquid credit, and real estate) with over \$5 billion in liquid credit.³

TPG Twin Brook Capital Partners, founded in 2014, positioned themselves as a provider for the middle-market private equity space, focusing on financing buyouts and recapitalizations of companies ranging from \$3 million to \$50 million of EBITDA (with a focus on targeting \$25 million and under).⁴ Twin Brook was the private credit subsidiary of TPG Angelo Gordon. Twin Brook closed deals across a variety of industries and its product offerings spanned revolvers, first lien senior secured loans, unitranche loans, stretch senior loans, and equity co-investments. Since inception, Twin Brook successfully completed over 525 transactions with total commitments reaching approximately \$13.6 billion as of the end of 2020.⁵

The original financing for Pinnacle consisted of a \$10 million revolver and a \$63 million term loan, and Pinnacle had an EBITDA of \$13.5 million. The facility was later expanded by the original two lenders to \$275 million as Arsenal closed on several transformative acquisitions. Four acquisitions were completed during 2018 alone, followed by eight additional acquisitions across the electronics, industrial, and infrastructure adhesives and sealants sectors over the span of three years. During this time, Arsenal built a world class leadership team with significant experience in the industrials sector, many of whom had previously collaborated with Arsenal, bringing valuable experience and continuity to the partnership.

Pinnacle capitalized on its scale quickly, accelerated its organic growth and unlocked heightened efficiency across several acquisitions. Within a few months of a typical acquisition, the company often achieved EBITDA growth by optimizing materials procurement, leveraging a broader portfolio of technologies, and cross-selling products across its broader platform. Several of the acquisitions completed also expanded Pinnacle's market presence outside of North America. Pinnacle sought acquisition opportunities with valuation multiples between 5x and 10x, and prioritized targets that could provide expanded capabilities, innovative technologies, or entry into new markets. This strategy bolstered Pinnacle's competitive edge while driving growth across all of the company's operations. Through this strategic approach, Arsenal successfully grew Pinnacle into a scaled platform, increasing the revenue from \$35 million in May 2018 to \$231 million as of March 2021. Additionally, the organic EBITDA growth of Pinnacle from 2018 to 2020 was 19% CAGR, compared to the adhesives and sealants market peers during the same period of negative 1.5% CAGR^c. (See **Exhibit 2** for Pinnacle's financials).

The global adhesives and sealant markets, valued at approximately \$60 billion and expected to grow to \$70 billion by 2025, was characterized by its fragmentation. At the upper echelon of the market, larger players dominated, including industry giants such as Henkel, H.B. Fuller, and Arkema. As of 2021, the top 7 companies made up nearly 35% of the global market. The North American and European markets in particular began experiencing more consolidation.

However, large-scale companies in the space were often focused on producing high-volume, low-margin products and applications. Their emphasis on mass production and standardization limited their flexibility, making the companies slower to adapt to consumer preferences and emerging market needs. Consequently, larger companies' operational focus on largescale product lines often left them less equipped to address specialized or niche product applications.

^c Based on the performance of Chase Corp., Ashland's Adhesives division, Sika, Henkel's Adhesives Division, H.B. Fuller, and Arkema's Adhesives Solutions segment. Source: Public filings.

On the other hand, the remaining two-thirds of the market was highly divided, largely consisting of smaller founder and family-owned business. Although these players often excelled in niche technologies, which allowed them to maintain strong margins, they faced significant barriers to growth due to limitations in product breadth, supply chain scale, channel access, and commercial research and development ("R&D") capabilities. Without the resources or infrastructure to expand their offerings, smaller businesses in the industry struggled to scale effectively or compete with larger players.

In this landscape, Pinnacle emerged as one of the few scaled platforms delivering specialized customer solutions. Market tailwinds like increasing demand for electronics, expanding infrastructure, growing demand for alternative energy products, and rising production of batteries for electric vehicles all contributed to the rapid expansion of the adhesives and sealants industry, making it an attractive sector for specialized product offerings provided by companies like Pinnacle.

By focusing on specialty, formulated products, Pinnacle established itself as a leader in the market. Pinnacle had several competitive edges. Its robust R&D team, with an impressive 98%+ retention rate, provided technical expertise to support innovative and tailored product offerings. Unlike its larger competitors, Pinnacle centered around consumers and flexibility, allowing the company to respond quickly to customer demands and market shifts.

The company's core customer base was also another key differentiator. Highly diversified, Pinnacle's top five and ten customers accounted for only 26% of total sales, with many long-standing relationships lasting over a decade. Customer stickiness was further enhanced by Pinnacle's ability to pass the changes in raw material cost on to the consumer, since Pinnacle offered specialty products. Furthermore, by fully owning all products tailored for clients, Pinnacle ensured a high degree of customization and retained strong relationships across all levels of its customer's organizations.

While Pinnacle's strong differentiation fueled significant growth, the management team recognized emerging challenges in the industrial environment. These included rising costs in the global chemicals industry, driven by COVID-19 supply chain disruptions, and increasing demand for raw materials, which created headwinds for the entire adhesives industry.⁶ Other natural events, such as the February 2021 Winter Storm Uri caused further setbacks for the global chemicals supply chain.⁷ Still, Pinnacle was able to navigate these challenges while maintaining strong revenue and margin figures but the macroeconomic challenges were increasing throughout 2021.

In addition to the robust growth Pinnacle achieved organically, the company still had two acquisitions under LOI, projected to close in the summer of 2021, with valuations of \$28 million and \$13 million. Pinnacle identified approximately \$2 million in combined synergies between the two companies under LOI. Additionally, there were several large acquisitions in the works and a broader M&A pipeline of 50+ acquisition targets. Unlike the prior acquisitions, several of the future M&A opportunities were outside of North America. More broadly, Pinnacle was expected to continue growing through acquisitions in the years to come. However, to sustain this growth, Arsenal would need to secure additional debt capacity, both for the acquisitions and for several pending operational initiatives.

At the time, Arsenal was considering an exit for Pinnacle by 2023. Arsenal recognized that the ultimate owner could be a strategic buyer or financial buyer that would continue to grow the company inorganically. This implied that a future financial buyer would likely require a financing package to fund the acquisition of Pinnacle. One consideration in the refinancing was educating the market about Pinnacle's strong fundamentals and growth potential, which could enhance and optimize future financing options for eventual buyers.

Debt Financing Options

As Mullen and Seroussi deliberated on the best course of action for financing Pinnacle's growth, they considered four distinct options. Each option carried unique implications for the company's capital structure, operational flexibility, and future exit opportunities. With multiple acquisitions in the pipeline, organic growth underway and future sale, the choice of financing was crucial for determining the trajectory of the business and its eventual exit strategy. (See **Exhibit 3** for Pinnacle financial projections.)

Option 1: Retain Existing Lenders

Option 1 was relatively straight forward since it involved expanding the M&A facility with the current direct lenders, and Arsenal had closed similar deals before. The established rapport between Arsenal and its existing lenders ensured an efficient process given that the team could leverage existing credit agreements. Pinnacle would keep its current rate of LIBOR +5.50% (LIBOR floor at 1.5%), and the Arsenal team anticipated that this type of deal would only take around one week to close, as the credit underwriting for Pinnacle was already in place. However, one key drawback was whether the existing lenders would have the capacity to continue funding the company at the scale required for future growth. Direct lenders, typically balance sheet lenders, were often constrained by the size of their own balance sheets, potentially limiting their ability to increase exposure in larger deals or new acquisitions down the line. Arsenal estimated that existing Pinnacle lenders had capacity for another \$50-100 million. Any add-on acquisition facilities above this amount would require an additional origination fee of 2%. Furthermore, the existing facility allowed for limited M&A activity outside the U.S. Lastly, the maturity of the existing facility would remain in place at a 2023 maturity.

As it was typical for direct lenders, the existing credit agreement included maintenance financial covenants. Specifically, the agreement featured a Total Leverage Ratio, defined as Total Indebtedness minus Cash divided by Pro Forma EBITDA, which could not exceed 4.75x as of Q1 2021. According to the credit agreement, the Total Leverage Ratio would decline to 4.5x by Q3 2021, 4.25x by Q2 2022, and 4.0x by Q1 2023. The agreement also included a Fixed Charge Coverage Ratio, defined as Operating Cash Flow divided by Fixed Charges, which must remain at least 1.2x.

The original maturity of the loan was five years, with 1% annual amortization in the first three years and 2.5% annual amortization thereafter. The loan allowed for penalty-free prepayment of principal.

Option 2: Refinance Debt with Existing and New Direct Lenders

Mullen and Seroussi referred to Option 2 as a "hybrid solution", where Arsenal would build on the existing relationship with Kayne Anderson and Twin Brook, while bringing in 2 to 3 new direct lenders to enter an expanded "club deal". Option 2 would extend the maturity of the facility by five years. By diversifying the original lender base, Arsenal would secure \$200 - \$300 million of additional capital upfront. However, this additional capital would come with an upfront fee of \$5.5 million. The club deal option also introduced complexity in lender coordination and due diligence, mainly as two existing lenders and the two to three new lenders would have to underwrite a new facility. This could potentially prolong the closing process.

Arsenal expected that this option would lower the interest rate to LIBOR+4.75% (LIBOR floor of 1.5%). The covenant structure, amortization, and prepayment options were likely to be the same as in the current agreement. Overall, while identifying the new lender and formalizing the new agreement would take some time, the new credit agreement was likely to just be an amendment to the existing

credit agreement. Mullen and Seroussi expected that this process would take two to three weeks to close beyond Option 1 and require a moderate time allocation from Pinnacle's management team.

Option 3: Refinance with First-Lien Debt under a newly Syndicated Loan ("Accordion" Type Facility)

Under this scenario, the company would fully transition to a syndicated loan structure, essentially venturing into a new market for Pinnacle. After the Arsenal team conducted an initial market read, it was clear that there was strong institutional demand.

In early 2021, the U.S. leveraged loan market was booming. (See **Exhibits 4a and 4b** for U.S. institutional loan volume and average debt multiples for highly leveraged loans). Among other factors, the strong creditor demand appeared to be driven by investors being drawn to high-yield debt as a result of low Treasury yields.⁸ In this context, it was likely that Pinnacle's loans would be covenant-lite, meaning that the loan was unlikely to have maintenance financial covenants thereby giving Arsenal a greater amount of flexibility. More broadly, the Arsenal team expected the negotiation of creditor protection terms to be minimal.

The proposed deal would be structured as a 5-year, \$25 million revolving credit facility and a 7-year, \$300 million Term Loan B. (See **Exhibit 5** for the sources and uses, and **Exhibit 6** for the pro forma. See **Exhibit 7** for the Term Loan B terms). An additional advantage of this package was the ability to negotiate an expandable ("accordion") lending facility, which would increase over time to accommodate Pinnacle's M&A transactions without needing to renegotiate the terms of the original loan agreement, subject to certain indebtedness limits. This arrangement provided substantial flexibility for both U.S. and foreign acquisitions.

The Arsenal team interviewed four separate banks and ultimately decided to potentially partner with J.P. Morgan due to their leading market position, experience in the industrial sector, and a longstanding relationship with Arsenal that spanned over a decade. Mullen and Seroussi felt that J.P. Morgan's team had a strong understanding of the credit profile of the Pinnacle deal, and that their sales team was well-equipped to articulate Pinnacle's vision to potential creditors due to their strong track record in the specialty industrials sector.

However, switching to the broadly syndicated market came with several additional fees. Arsenal anticipated about \$7 million in upfront costs: \$4 million for arranger fees and \$3 million for Original Issue Discount ("OID"). Additionally, the syndication process involved several steps, such as roadshows and rating procedures. While the loan would be originated by the banks, highly leveraged loans like Pinnacle's were funded through syndication to a broad base of non-bank institutional investors. Approximately two-thirds of the institutional participants were collateralized loan obligations ("CLOs"), which primarily invested in rated loans. (This was not a requirement for direct lenders.) The broadly syndicated option would allow Pinnacle to build a network of investors who could continue to scale with the company.

The administrative costs, including legal fees, rating agencies, and other administrative expenses, were expected to total an additional \$1 million. Overall, the entire process for a new syndicated loan could take anywhere from 2 to 2.5 months, with approximately 1.5 months for preparing and obtaining the credit rating, around 1 month for a roadshow involving 30-40 lenders and negotiating the new credit agreement, and roughly 1 week to "optimize the book" for offers from debt investors. This final step, allowed the terms of the loan to be "flexed" or modified if creditor demand exceeded the size of the loan.

Similar to Option 2, this facility would have a 5-year maturity. The syndicated facility provided flexibility to acquire companies outside of North America (up to 50% of pro forma EBITDA).

Option 4: Refinance Existing Debt with First-Lien and Second-Lien Debt Under Newly Syndicated Loans (Dividend Recapitalization)

The final option involved a full-scale refinancing, combining first-lien and second-lien debt under a syndicated loan structure. This approach could provide the firm with significant liquidity, not only to fund acquisitions but also to enable Arsenal and shareholders to receive close to \$120 million in dividends. While this strategy allowed for partial realized returns ahead of an exit, it carried higher risks. Second-lien debt typically commanded higher interest rates due to the higher leverage in the capital structure.

Most of the terms for the first-lien facilities were likely to remain the same as in Option 3 (**Exhibit 7**). The second lien was expected to be priced at LIBOR + 7.5% to 8.5%, and would be required for leverage beyond 5.0x. The second-lien creditors were likely to overlap with the first-lien creditors. Nonetheless, Arsenal anticipated an additional \$2 million in upfront fees.

Unlike the first-lien facilities, which typically had more flexible prepayment terms, the second lien would carry a prepayment cost in the event of a sale within the first two years. Specifically, the prepayment penalty would be 102% in the first year and 101% in the second year. This meant that the second lien would need to be paid in full, with a 2% penalty in the first year and a 1% penalty in the second year.

Similar to Option 3, the debt capacity could scale with the company's growth and provide a 5-year maturity.

Decision

As Mullen and Seroussi evaluated their options, they faced a critical decision: how could they best structure Pinnacle's financing to sustain its growth trajectory? Does Arsenal value a dividend instead of leaving dry powder for sizeable M&A? How much leverage is appropriate given the economic environment? How can they best position the company for an eventual exit?

Exhibit 1 Arsenal Capital Partners Team

Team Member	Bio
Terry Mullen (Managing Partner, Chief Investment Officer)	Mr. Mullen is the Managing Partner and Chief Investment Officer of Arsenal. Prior to founding Arsenal in 2000, he was a Principal of Thomas H. Lee Partners, where he had a leading role in numerous growth buyout investments. Mr. Mullen also worked in the investment banking division of Morgan Stanley & Co.
Roy Seroussi (Investment Partner)	Mr. Seroussi is an Investment Partner of Arsenal for the industrial growth team. Prior to joining Arsenal in 2008, Mr. Seroussi was an Analyst of Credit Suisse in the industrials group.
